"All-In-One"

Additional devices for the smartphone

Do you only use your smartphone for making calls?

You always have your smartphone with you and you also make sure it is sufficiently charged, this is now part of everyday life and has become second nature to us.

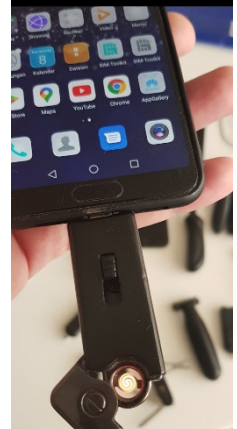

This is your new solution:

"All-in-One" now uses your smartphone as an energy source for some useful devices, where you can save your own batteries and necessary chargers. Energy is always available in the smartphone, which saves you the negative experience of wanting to use an additional device, but its battery is not sufficiently charged at that time.

The add-on devices are adapted to all common smartphones and can therefore be used "universally".

The following additional devices are available in "All-in-One":

- Electric lighter (with incandescent coil, in designer miniature versions).
- Electric arc lighter (arc or plasma, for lighting cigarettes and cigars).
- Electric toothbrush (small and compact, always with you).
- Electric trimmer (for shaving or beard trimming, small and compact).
- Electronic cigarette (thermal vaporization of tobacco)
- Vape (electric vaporizer of liquid tobacco mixtures)
- Taser (small and compact, for protection from enemies or animals)
- Electric fan (miniature, good solution in hot weather)
- Mini electric massager (soothes tired facial muscles)
- Electric thermometer (for remote measurement of room, body temperature and cooking)
- Laser pointer (for presentations in the office)

Electric lighter

In combination with these devices, modern smartphones can offer their users more than just communication.

Laser pointer

"All-in-One" does not require batteries, rechargeable batteries or chargers that the invention SAFER, COST-EFFECTIVE and ENVIRONMENTALLY FRIENDLY in production.

"All-in-One" can be engineered, where appropriate, so that the devices can only connect to specific smartphones or to a brand of smartphones, as a **competitive advantage for a smartphone manufacturer**.
