## About us

InvenComm GmbH was founded in 2002 (in 2004 as GmbH) as invention and a patent commercialization corporation. Corporate purpose is the commercialization of inventions in the field of capital and consumer goods also partly under its own brand. An international network in most continents is used for our proximity to markets.

Our goal is to accompany the inventor from the first designs over the manufacturing up to the marketing of the products.

Since the area of responsibility is steadily expanded and the contracts often more went to the pure consulting area, the business purpose was on customer request extended to the pure business consulting.

- Invention and Patent Commercialization
- Consulting

**Ideas are the capital of the future!**

Protect your best ideas and put them strategic into action. We support you!

## Invention and Patent Commercialization

If the marketing strategy decides for sale of the entire property rights or the sale of individual licenses, we are your partner and help you find the appropriate partner. Here you can use our good industry contacts but also technical expertise.

If you use your patent itself for your business, the licensing for other applications or regional markets, in which you yourself are not active, provides the possibility for additional cash from your patent.

We can assist you in preparing the e sales and licensing agreements.

But we wish to emphasize that such sale is only possible when "protected" inventions with sufficient product documentation and completion are available.

One of our specialties is the search for new licensees for rights holders who are dissatisfied with the performance of its licensee. We carry out this task successfully and discretely.

**We talk to potential license or patent buyer directly!**
