T-Roll

The paint roller that always reaches into the corner

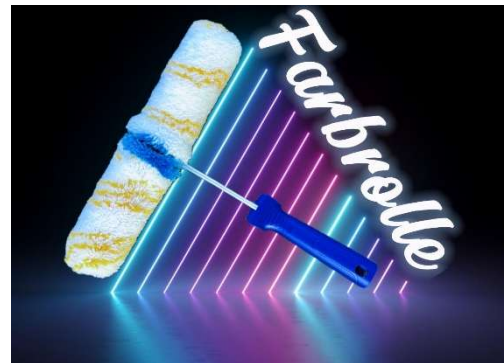

Description of the problem:

When painting walls, especially in corners or hard-to-reach areas, the protruding sides of conventional paint rollers interfere with clean work and often cause unclean edges or damage to already painted surfaces. In addition, paint drips from unprotected areas and the roller surface is limited.

The market mainly offers classic paint rollers with a single-sided roller and a laterally protruding holder. Some models try to reach the corners with angled holders or smaller rollers - but at the expense of efficiency or ergonomics.

The new solution:

The target of the invention is to create a tool that paints efficiently, cleanly and over a large area - right into every corner. A roller that uses a double-sided roller arrangement to create a seamless painting surface and at the same time can easily reach into corners has not been known until now.

The invention is a double-sided paint roller with two paint rollers that are attached to a central bracket. This holder ends exactly between the rollers so that no part protrudes to the side. Together, the rollers form an almost continuous, wide paint surface. The axis runs centrally, both rollers rotate together and enable an even, flat application of paint - even in corners. The design can also be equipped with paint catchers and position guards to save paint and make it easier to work cleanly.

Phone: 0041 (0) 43 4435472
Email: inven@invencomm.com
Web: www.invencomm.com

Advantages:

- Painting right into corners without the need to turn the roller through 180°.
- Double paint roller surface, allowing large-area painting.
- Seamless transition of the paint roller coverings, prevents streaking.
- Ultra-stable rolling / even pressure for clean & precise results
- Innovative coating systems (conical, elastic) enable perfect coverage.
- Rollers can be designed in different dimensions and different coverings.
- For professionals and do-it-yourself enthusiasts alike, it offers greater efficiency, better ergonomics and less frustration.
- Real added value - with every coat..

⇒ Innovation with unique selling points, protected by patent
⇒ High customer benefit
